Comments:

Hello, My name is Tim Tsukamoto. I have a PhD. in Environmental Chemistry from the University of Nevada, Reno. My specialty is treatment of acid mine drainage. I have designed and implemented treatment systems on sites throughout North America and internationally. I have worked with EPA on several Acid Mine Drainage treatment projects (Primarily with Ed Bates from ORD). I have treated water at Cement Creek directly from the creek and from the American Tunnel discharge, so I am very familiar with the site. The equipment utilized was mobile equipment that I use on emergency treatment projects. I have the ability to respond to acid mine drainage emergency situations, because my equipment is mobile and efficient and can easily be operated at remote locations, powered by a small to medium sized generator. I have responded to emergency situations very similar to the release at Gold King and have prevented release of untreated AMD while meeting discharge requirements.

I am confident that my experience and specialized equipment can be utilized at this site. I can provide a resume, reports from similar projects and a proposal if you would like me to respond to this urgent situation.

Thank you for your consideration.

Timothy Tsukamoto, PhD.
